Portfolio:
mostaqil.com/u/Omar_Faqeeh

TECHNICAL SKILLS

- Full-Stack Web Development
- RESTful API Architecture
- IoT & Embedded Systems
- Robotics & Automation
- AI Workflows & Automation
- Computer Vision (OpenCV)
- Data Structures & Algorithms
- Problem Solving
- Software Design Patterns
- Clean Code Methodology

LANGUAGES

- **Arabic:** Native
- **English:** Professional

SUMMARY

Results-driven Full-Stack Web Developer and IoT Engineer with a solid foundation in building scalable admin dashboards (CRUD), RESTful APIs, and automation workflows. Specializing in the MERN stack (Next.js, React, Node.js, MongoDB) alongside professional enterprise backend development using C#. Expert in orchestrating smart systems, computer vision environments, and embedding high-throughput logical pipelines into microcontrollers. Proven track record in leveraging design patterns and advanced problem-solving to deliver fluid, highly optimized software architectures.

CORE COMPETENCIES & AI EXPERTISE

Highly effective in harnessing Artificial Intelligence systems, deploying advanced prompt engineering methodologies to orchestrate optimal backend layouts and codebase flows. Experienced in driving complex operational efficiency by building AI automation layers, creating automated systems using **AI Agents** for workflow acceleration, task tracking, comprehensive content curation, and autonomous script generation.

CERTIFICATIONS

Introduction to Programming With C#
Authorized by Microsoft | Issued April 2026

C# Programming Fundamentals Certification
Authorized by IT Legend | Issued April 2026

Developing Back-End Apps with Node.js and Express
Authorized by IBM | Issued December 2025

Generative AI and LLMs: Architecture and Data Preparation
Authorized by IBM | Issued April 2026

Claude 101 Training Curriculum
Authorized by Anthropic | Issued June 2026

CS50: Introduction to Computer Science
Authorized by Harvard University

OMAR AHMAD ALFAQEEH

TECHNICAL PROJECTS & PROGRAMMING EXPERTISE

TECHNICAL EXPERTISE & STACK

Languages & Frameworks: C#, JavaScript (ES6+), TypeScript, Python, React.js, Next.js, Node.js, Express.js.
Hardware & Embedded: C++ for Arduino, MicroPython, Arduino Mega, Raspberry Pi 5, ESP32, Microcontrollers.
Libraries, UI & Tools: OpenCV, MediaPipe, MUI (Material-UI), MongoDB, Relational Database Design, Git, n8n Automation.

EXPERIENCE & PROJECTS

MOBTAKER (COMPREHENSIVE AI & IOT EDUCATIONAL ECOSYSTEM)

Active / Present

Architected, designed, and deployed a comprehensive, enterprise-grade AI and IoT educational ecosystem completely from scratch to bridge the gap between theoretical knowledge and engineering production. Programmed a highly advanced visual Code Lab Workspace enabling students to build, simulate, and debug hardware-software projects step-by-step. Integrated a custom, context-bound intelligent assistant to dynamically guide developers through building pipelines. Developed a production-ready Gamification Engine featuring micro-credentials, interactive scoreboards, and reward logic alongside an enterprise Multi-School Administrative Command Dashboard ensuring seamless teacher oversight and deep educational analytics tracking.

TECHNOLOGIES USED: NEXT.JS, REACT.JS, MUI, NODE.JS, EXPRESS.JS, MONGODB, CONTEXT-BOUND AI MODELS, GAMIFICATION LOGIC

AUTONOMOUS INTERACTIVE VOICE-CONTROLLED ROBOT

Awarded 1st Place

Engineered a complete smart robot utilizing the Arduino Mega microcontroller. Integrated a specialized computer vision camera environment leveraging OpenCV and MediaPipe alongside interactive display feedback screens. Programmed embedded real-time voice processing capabilities allowing execution of speech commands, advanced robotic kinematics for object manipulation/grabbing, and calibrated sensor feedback for temperature and humidity, winning First Place in innovation tracking.

TECHNOLOGIES USED: ARDUINO MEGA, C++ FOR ARDUINO, OPENCV, MEDIAPIPE, VOICE RECOGNITION MODULES, ROBOTICS KINEMATICS

RASPBERRY PI 5 INFRASTRUCTURE: NEXT-GEN SMART CITY ECOSYSTEM

Technical Build

Architected and deployed a fully integrated smart city simulation ecosystem driven by the high-performance Raspberry Pi 5 platform. Developed real-time hardware-to-software integration layers to connect web-based monitoring software with localized microcontrollers. Engineered an intelligent automated garage system, real-time fire detection/suppression algorithms, automated safety gates, and cross-coordinated sensor/actuator infrastructure networks to handle automated environmental monitoring securely.

TECHNOLOGIES USED: RASPBERRY PI 5, PYTHON, MICROPYTHON, SENSOR FUSION, ACTUATOR LOGIC, WEB-APP SYNCH

RABIE AL-QALB (COMPREHENSIVE ISLAMIC & GEO-LOCATION SYSTEM)

January 2026

Architected and developed a feature-rich Islamic application integrating a complete digital Quran reader and a multi-reciter high-fidelity audio streaming system. Designed and engineered a fully secure user authentication workflow integrated with a robust backend database for preference retention. Implemented advanced Geographical Location APIs to calculate highly accurate local prayer times, dynamically determine global Qibla directions, and track historical Islamic calendar events. Implemented a highly dynamic theming system capable of rendering numerous rich layout styles on the fly.

TECHNOLOGIES USED: NEXT.JS, NODE.JS, MONGODB, GEO-LOCATION APIS, AUDIO STREAMING ENGINE, DYNAMIC THEMING (MUI)
